

Case Study

Trinity Lutheran Church, Omaha NE

Challenge

- The sanctuary was using outdated incandescent and halogen lamps that consumed excessive energy and were highly inefficient.
- They wanted to preserve their traditional and decorative pendant fixtures to maintain the historic aesthetic.
- Their goal was to upgrade to LED lighting while gaining the ability to control and dim each fixture individually and set custom lighting scenes wirelessly from an iPad.

Solution

- Voss collaborated with Trinity to design a seamless solution, retrofitting their existing pendant and house lights with energy-efficient, dimmable LED bulbs. To ensure a smooth transition.
- Voss professionally commissioned each fixture and provided hands-on training, empowering Trinity to control their lighting and create custom scenes for any event.

Improvements/Benefits

- The sanctuary now has crisp, clean LED lighting delivering uniform illumination throughout the sanctuary, while highlighting the beautifully designed wooden ceiling.
- Trinity now has a user-friendly app that lets the church control all lights effortlessly from their phone or a wall-mounted iPad.

"Trinity Lutheran Church was fortunate to connect with Voss Lighting during this project. The working relationship was thorough, patient and the product they delivered was as promised."
