

Case Study

Corewell Health, Dearborn, MI

BEFORE

Challenge

- The existing suspended and cove fixtures weren't uniform due to aging fluorescent lamps.
- The suspended fixture lenses were dusty, brittle, and falling apart during lamp and ballast changes.
- The hospital was looking for opportunities to save energy.

Solution

- Replace the existing fixtures with uniform linear LED lighting.
- Specify energy efficient suspended LED fixtures with up and downlights to improve the image of the space.
- Specify seamlessly connected LED light bars for the coves.

AFTER

Improvements/Benefits

- Improved ambiance and quality of light
- Virtually maintenance-free lighting
- Significantly reduced energy usage

"Everything looked really good. Thank you for your hard work in getting this completed. SSU looks amazing!"
